

Mobile Information Systems

We mobilize
your business

About Us

MOBIS ICT is a Dutch company, specialized in the development of Mobile solutions for the Oil & Gas, Renewables, Petrochemical and Infrastructure industry*. Based on our standard Mobile Apps we can deliver full tailor made solutions in line with your requirements and your existing application landscape.

Our Mobile solutions can be complemented by high quality maintenance support services in multi-platform environments.

Why to choose our Mobile Solutions?

- Our Apps are platform independent. This means that our Apps can be used on various mobile devices (Smartphones and Tablets) and Operating Systems (iOS, Android, BlackBerry, Windows, etc.).
- Flexible solutions which can easily be integrated within your existing application landscape.
- Our database can also be hosted locally (on your own server).
- All our Mobile Apps can also be opened from a Web Browser.

*Our Inspection, Audit and Online Documentation solutions can also be used within other sectors like local authorities and insurance companies.

Inspections & Audits App

This mobile solution provides for:

- All your required inspection and audit forms containing various types of input fields, validation criteria, conditional questions and the possibility to put a signature.
- Taking pictures.
- Inspection and audit results, including pictures, to be immediately saved on a central server.
- Performing multiple inspections in parallel on the same device.
- Synchronization of the inspection results with your existing database.
- Inspections to be performed in the absence of an internet connection.
- Delivery of tailor made Management Reports.
- Inspection database that also can be implemented within the client infrastructure.

Online Documentation App

This mobile solution provides for:

- A taxonomy structure containing all your required documents.
- Both PDF, Word documents and Plain text versions of documents in the database. Plain text versions save your organization costly data transfers as these are small size documents.
- Searching on text fragments.
- Opening documents or folders by scanning a related barcode tag.
- Connection to our standard or to your existing documentation management system.
- Standard database that also can be implemented within the client infrastructure.
- The installation of a local server to disclose your documentation onsite through our App using WiFi LAN, in the absence of an internet connection.

Main Problems

Time consuming

You are experiencing that performing inspections and audits using pen and paper and searching for documentation is time consuming.

Inaccurate registration

You are experiencing that the registration of inspection and audit findings, observations and incidents using pen and paper is inaccurate.

Missed a Safety Hazard

You have not noticed or recorded a potential safety hazard.
